DATU CENTRS

## IF WE CONSIDER THAT:

- To use the technology is our own choice
- Development is defined by tempo and scale of majority - we will experience the situation where it will not be possible to survive for those without knowledge and ability
- Profit of the company depends on our own skills to adapt - to use possibilities and avoid the risks

## THERE IS GOOD NEWS FROM TIMBER FLOW DATA CENTER MANAGED BY TIMBER BUYER AND TIMBER SELLER ASSOCIATIONS:

Instead of paper business documents **already now** it is possible to use integrated data exchange structure that includes:

- ✓ *papiNet* data standard
- ✓ classifiers for partners, transport, and timber
- ✓ codes
- ✓ safe, reliable, and fast data exchange platform DACE

## IF YOU AND YOUR PARTNER ARE USERS OF DACE YOU CAN FORGET ABOUT SIGNING OF PAPERS IN TIMBER DELIVERIES:

- completely automatize delivery and receiving of data and also continue to use of well-known and convenient excel tables
- in a need or because of habits - to see and print .pdf files:
  - transport waybill
  - delivery document
  - timber measurement document
- the automatization of “gates” becomes possible in a timber delivery place, e.g. with introduction of reader of registration number of a transport
